

Evaluation – undergraduate: ELEC 497

- **ELEC 497 Research Project** (K3.5) - The student works on a research project under the supervision of a faculty member. A research problem is formulated and the problem is contextualized within the discipline. The student does a current literature review, and explores in detail a solution to the research problem.
 - The student writes the report following the IEEE conference format (the template will be provided). The maximum number of (two-column) pages is 5, followed by extra page(s) for references.
 - Serving as the ELEC 497 instructor, the Department Head assigns an independent reviewer for evaluation of the report.
 - The ELEC 497 supervisor and the independent reviewer use the form for grading (see the next slide).
 - The ELEC 497 supervisor and the independent reviewer submit only their final marks independently to the ELEC 497 instructor
 - The marks of the supervisor and the second reviewer are weighted by 0.7 and 0.3, respectively.

Evaluation – undergraduate: ELEC 497 form

ELEC 497 Final Evaluation Form

Student name:	Fall/Winter/Summer Session (enter year):
Project report title:	
Supervisor name:	Supervisor signature:

CATEGORY	CRITERIA	EVALUATION
Research Problem Statement and Motivation	<i>Is the research problem described in a clear manner in the report? Does the student explain the relevance of the research problem and its potential technological impact in the field and in society at large?</i>	___ /20%
Literature Review	<i>Does the report contain a review of works by others that are relevant to the research problem? Does the literature review contain a good balance between recent works (< 3 to 4 years) and classic works? Does the student provide a critical analysis of related research?</i>	___ /20%
Methodology Progress Result	<i>Does the student give adequate technical/ mathematical formulation of the approach taken? Does the student describe results obtained or issues encountered in the course of research? Is the research methodology described in sufficient technical detail? Was the research performed of a high caliber?</i>	___ /45%
Report Quality	<i>Is the report free, or mostly free, of grammatical and spelling errors? Are the figures of high quality? If figures (or other content) are borrowed from other works, are those other works properly cited? Are the references cited using the correct (e.g. IEEE or ACM, etc.) bibliographic format? Is the material easy to understand and well organized? Is the flow of the document good?</i>	___ /15%
	Project Mark	___ /100%
